

Better homes for
better living.

uPVC DOORS & WINDOWS

Can homes be built to enhance our lives?

Home is our place of Zen. It is an environment where we feel safe, happy, and at peace. To create that ideal space, one should ask many questions.

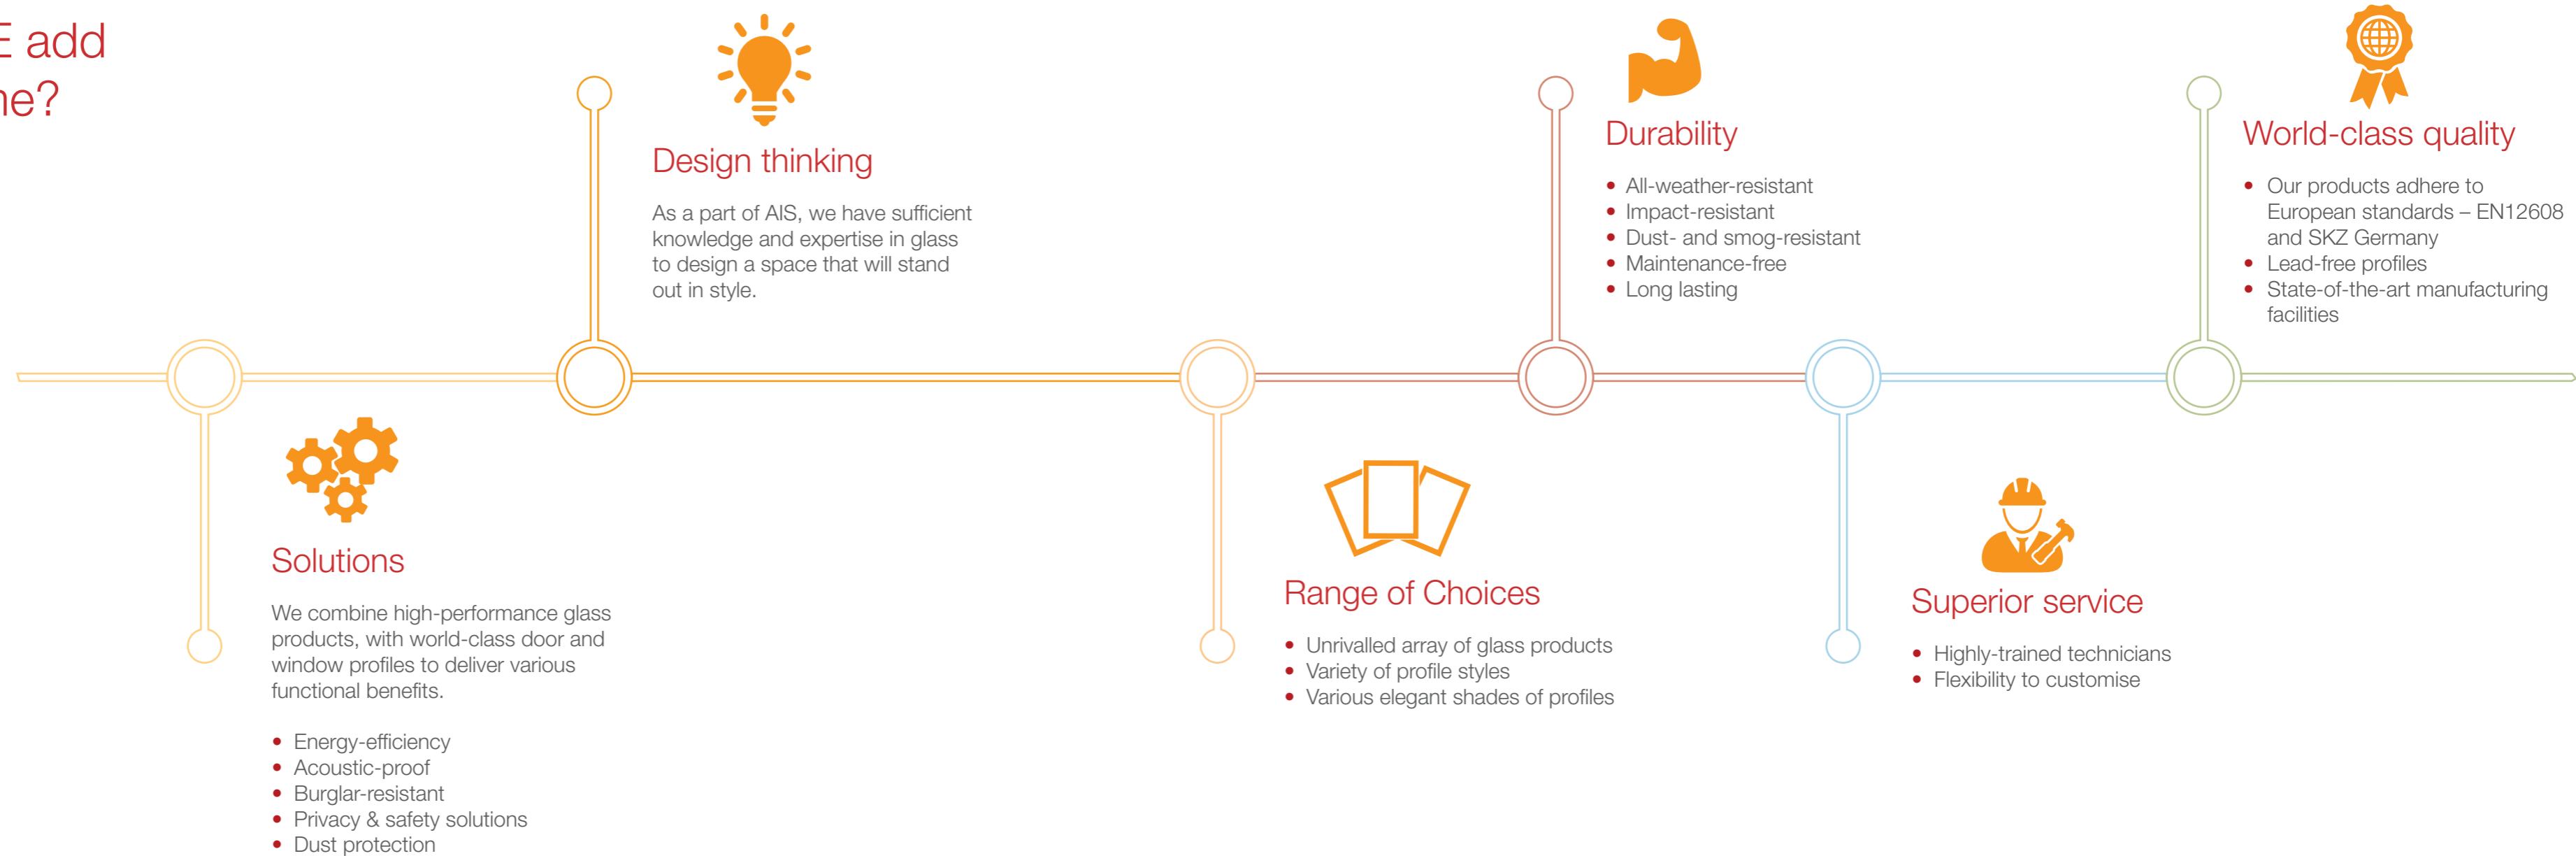

- Can a home be more than just a comfortable space?
- Can we make best use of sunlight, and at the same time keep harmful UV radiation out?
- Is there a simpler, smarter way to cut down electricity bills and be more eco-conscious?
- Can we live in a home that is noise-free?
- How can we optimize ventilation, and at the same time keep our home dust-free?

The answer to all this and more is, the right combination of glass products and window frames.

The right combination of high-performance uPVC doors and windows can do wonders to the space around you. It can enhance the aesthetics of the interiors, and at the same time transform the way you live. It can make every space fashionable, yet functional; timeless, yet modern; inspired – and inspiring. It can make your home smart without any smart devices.

This is exactly what you get from AIS VUE - a comprehensive uPVC door and window solutions provider. Brought to you by AIS, India's leading integrated glass company.

How can AIS VUE add value to your home?

Solutions

We combine high-performance glass products, with world-class door and window profiles to deliver various functional benefits.

- Energy-efficiency
- Acoustic-proof

- Unrivalled array of glass products
- Variety of profile styles
- Various elegant shades of profiles

Durability

- All-weather-resistant
- Impact-resistant
- Dust- and smog-resistant
- Maintenance-free
- Long lasting

Superior service

- Highly-trained technicians
- Flexibility to customise

World-class quality

- Our products adhere to European standards – EN12608 and SKZ Germany
- Lead-free profiles
- State-of-the-art manufacturing facilities

How to brighten up your home, without raising the temperature?

A naturally-lit interior is very important for your home. It makes your interiors feel warm, pleasant, and inviting.

However, this warm feeling shouldn't be replaced with warm temperature. Traditional door and window systems let the sun's light as well as its heat inside. This increases the room temperature, leading to higher usage of air conditioners.

With AIS VUE's energy-efficient solution – **EcoVUE**, you can significantly reduce the amount of sun's heat that enters your home, and thus keep your interiors comfortably cool. Our solutions are designed to help you create a pleasant environment regardless of the season.

So open your blinds and let the natural light flood your home beautifully.

Isn't it better if the noise stays out of your home?

Our urban spaces are filled with annoying noises. And noise can have adverse effects on our health. That is why, it is important to make our living space a tranquil environment.

uPVC doors and windows can help you mute the outside noise, and will let you enjoy the calm and peace you seek. **SilentVUE**, our noise-cancelling solution, reduces up to 42 decibels – that is up to 94% of external noise. It combines AIS Acousticglas™, our noise-cancelling product, with the inherent feature of uPVC profile, i.e. fusion welded and double-sealed mechanisms, to give you excellent sound insulation.

When you are at home, be at peace and give ear to only the things that matter most.

Home safe home.

Home is a place where we feel the safest. But there are instances when we need to protect our family from damages inside the house.

Glass is one such material that is usually considered fragile and a potential cause of injury if damaged. But what if we told you it can offer superior strength and safety?

Our safety solution – **SafeVUE** – includes glass products that are several times stronger than ordinary glass. Even in case of breakage, they disintegrate into minute granules, and preclude the possibility of serious injury.

So you can rest assured that your home is safe and secure with **SafeVUE!**

Glass can protect your home from heat, dust, and noise. And even burglars.

Contrary to popular belief, glass can be a very robust material. It can be used to protect your home from accidental and deliberate damage in many ways, while enabling attractive designs.

Innovations in glass means, doors and windows can now protect your family from break-ins. Our security solution – **GuardVUE** comes with value-added laminated glass products, multipoint locking systems, and the reinforced steel of uPVC profiles. Together they provide enhanced security and absolute peace of mind.

Enjoy the monsoon. But let it stay out.

In India, the monsoon season is a great relief. Everything around is greener and livelier. But it becomes a nuisance when the rain seeps inside our house through the windows.

Our solutions include uPVC profiles. They are airtight and waterproof, preventing rainwater seepage and annoying whistling sounds caused by strong winds. The EPDM gaskets and steel reinforcements make sure the windows and doors don't rattle in gusty winds and heavy rains.

The rains stay outside, you stay warm and cozy inside.

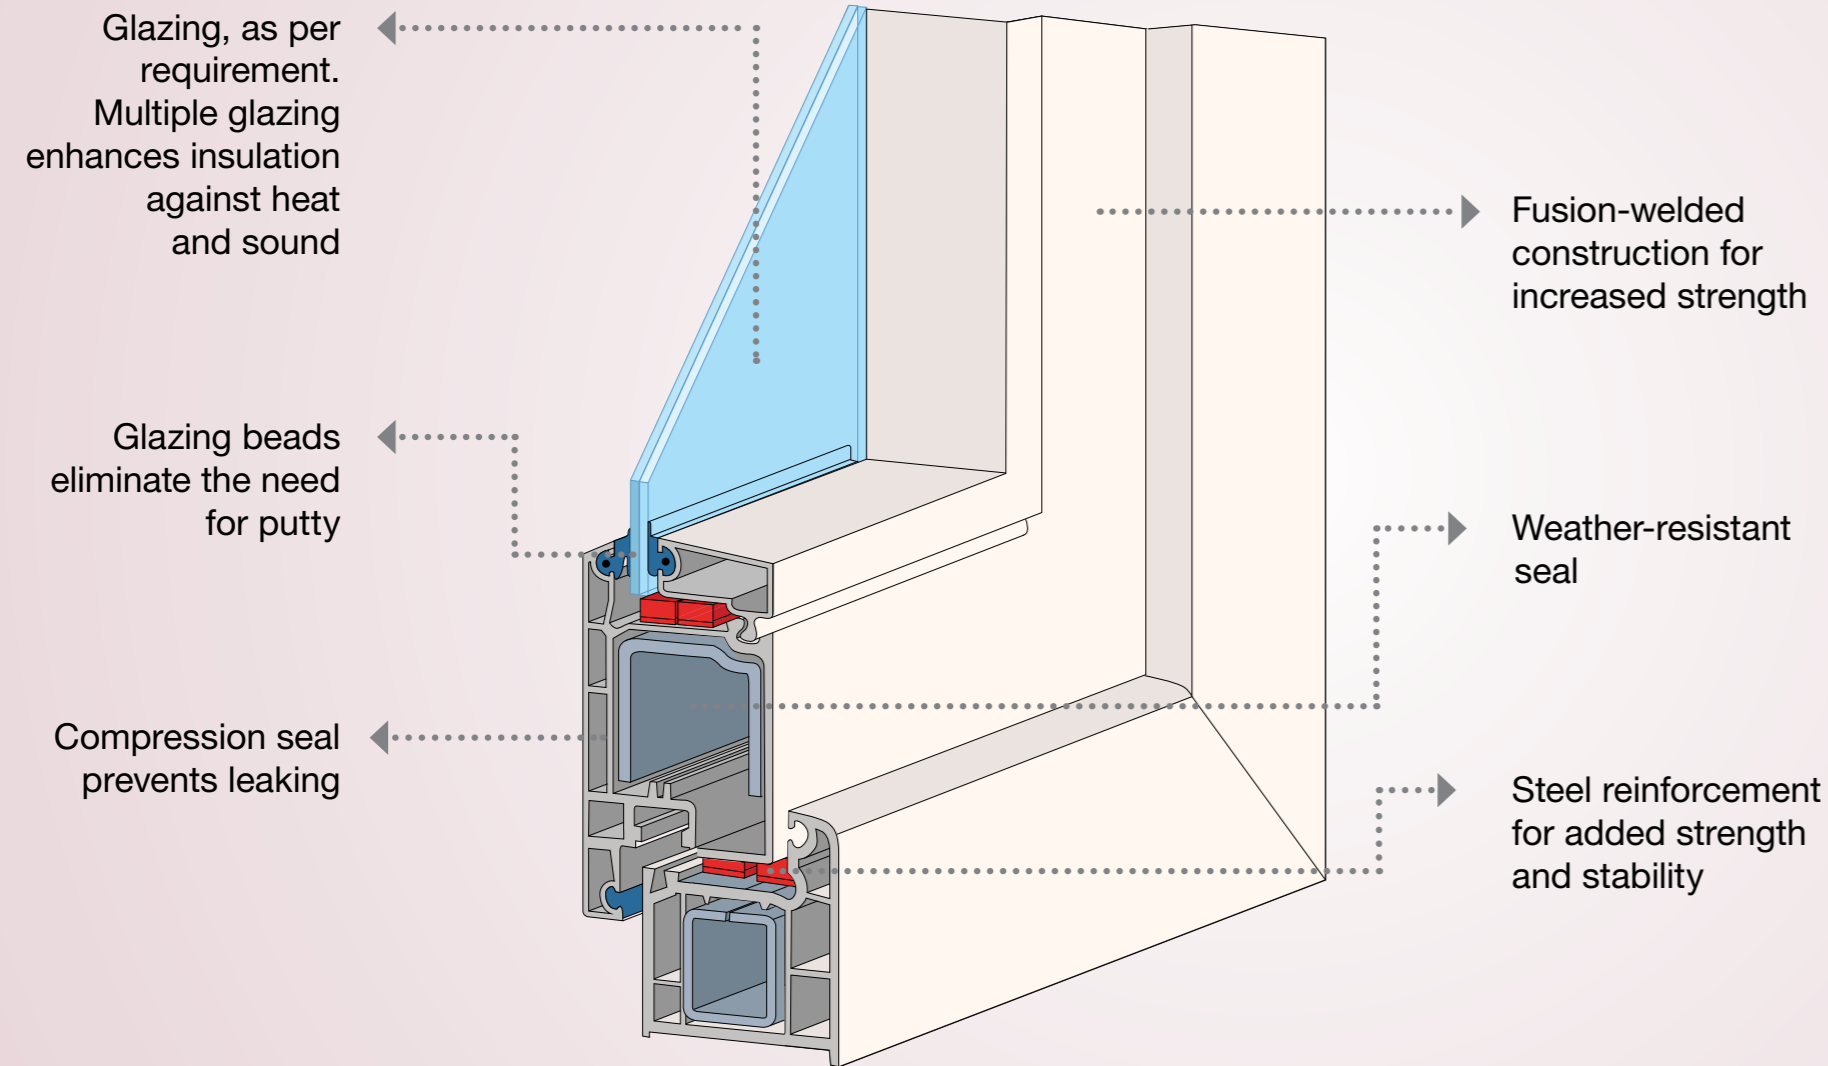

Let's create a whole new solution for you.

With **CustomVUE**, you can explore the wide portfolio of AIS' high-performance glass products and create your own unique, custom solution. We can help you bring together a combination of various benefits like, energy-efficiency, noise reduction, security, privacy and more, in one simple solution.

Choose from a variety of uPVC profile sizes, colours, designs, and even the hardware and locking systems to suit your space and your requirement.

Our experts are always there to guide you all the way, as you put a personal touch to your home.

The uPVC Mechanism.

Get the uPVC advantage with AIS VUE.

Thermal Insulation: Vinyl windows are excellent heat insulators

All-weather Insulated Frames: Double-sealed mechanisms, EPDM Gaskets provide a shield against dust and rain, and reduce air infiltration

Acoustic Insulation: Provides insulation against noise

Maintenance-free: No painting required, easy to clean and operate

Aesthetics: Stylish, modern, and available in various designs and colours – uPVC allows greater design flexibility

Durable: No pitting, peeling, rotting, drying out, or corroding. Resistant to termites

Structural Stability: Galvanized steel reinforcements

Safety and Security Mechanism: Single or multipoint locking systems

Drainage System: Internal water drain slots, raised track rail, and gradient slope prevent water stagnation

Eco-friendly: Lead-free profiles
